Market commentary: The VN-Index dropped 11.6pts in the ETF review session

The VN-Index dropped 11.6pts in the ETF review session as several market pillars suffered from strong selling pressure in the late trading. The stock market showed a negative face in the last weekday session, and quickly moved into the red territory right after the opening bell. Additionally, the lack of supportive information made investors' sentiment become cautious, causing the index to fluctuate around the area 1,240 -1,245pts right before noon break. In the afternoon session, the negative sentiment started to accelerate with the decreasing momentum widened towards the end of the session. Banking groups appeared to be the major cause for the index drop, including ACB, BID, TCB, TPB, VIB and drowning almost 4pts from the index. Only a minority of large caps performed well today and recorded a gaining session, including NVL (+1.3%), VPB (+0.8%), MSN (+0.7%), VCG (+5.2%), and PNJ (+1.2%). On the other hand, several large caps put down the index, led by VIC (-2.2%), HPG (-2.5%), GVR (-3.5%), CTG (-2.6%) and MWG (-2.6%). At the end of the session, the VN-Index dropped 0.9% to 1,234.0pts, and HNX-Index also declined 2.4% to 272.8pts.

Consumer Staples (+0.4%) and Health Care (+0.0%) rose, while Materials (-2.6%), Industrials (-2.0%), and Consumer Discretionary (-1.6%) lost ground today. Top index movers included VCB (+1.0%), VNM (+2.0%), VRE (+3.5%), NVL (+1.3%), and PDR (+4.3%). Top index laggards consisted of VIC (-2.2%), VHM (-1.5%), GVR (-3.5%), HPG (-2.5%), and CTG (-2.6%).

Market News

Shanghai crude oil futures close lower

Crude oil futures closed lower Friday in daytime trading on the Shanghai International Energy Exchange. The most active crude oil contract for November 2022 delivery was down 1.3 yuan (about US\$19 cents) to close at 663.5 yuan a barrel. The total trading volume for 10 listed crude oil futures contracts on the exchange was 177,861 lots, with a turnover of about 117.51bn yuan. China launched crude oil futures trading, which is open to overseas investment, in March 2018. (*Bloomberg*)

Credit growth limits in Vietnam and the effect on the economy

In Vietnam, the credit limit began in 2011 and it caused many problems to efforts to modernize the banking system. As for banking services, we can use the simple supply-demand model to explain. The product of banking service is credit, while the input material is the capital mobilized from the public and other sources. The price of goods is the interest rate, while outstanding loans are the output. Credit room is the limit of the output provided in the market. If the market equilibrium point has an output smaller than the total credit room, the policy, in general, won't have a big impact. But if the market equilibrium point has an output bigger than that set by the central bank, a goods shortage will occur. The lack of credit will increase the lending interest rates and decrease deposit interest rates. If the supply is short, commercial banks have to raise the interest rates to reduce the number of people who want to borrow money. They also lower deposit interest rates so that input capital is just enough for their credit room. As a result, deposit interest rates decrease and lending increases. The widening of the gap between deposit and lending interest rates helps to increase the profit margin of the whole banking system. As such, banks get higher profits. The question is why banks don't want the credit room policy, even though they benefit from it. The answer is that the whole banking system can benefit, but the benefits received by every bank are different. The best scenario for a bank is that the credit growth limit for the whole banking system increases by a little, but a bigger portion of the credit room is allocated to it. However, economic laws show that the quota scheme which sets limits on the output of the market or allocates output for every supplier will cause damage to customers and society. Another problem is that Vietnam not only sets limits on credit room, but also on the short-term lending interest rate. In principle, the credit room policy will cause lending interest rates to increase and if the interest rates exceed the ceiling levels, under-the-table transactions will be made. In order to borrow money, businesses will pay under-the-table fees. (*Vietnamnet*)

Sector note

Rice production sector

Rice on the rise

Rice prices soar as India restricted rice exports

On Sep 08 2022, India banned the export of broken rice (accounting for 11% of total exports) and imposed a 20% tax on other varieties (except basmati and parboiled rice) (accounting for 18% of total exports). India exports rice to more than 150 countries and contributes about 36.7% to global rice trade, thus any reduction in its shipments would increase upward pressure on rice prices.

Global rice supplies at risk as harsh weather hits top exporters

The recent harsh weather in top rice exporter countries in Asia, which accounts for about 90% of the world's rice output, is likely to curb the yields and definitely reduce the production volume this year. China, the world's largest rice consumer, has experienced severe draught across 7 provinces which might cut the country's rice production and is expected to lift rice imports to a record of 6m tonnes in 2022/23.

Vietnam is well-positioned to ride on the rice price uptrend

Vietnam is the world third largest rice exporter, behind India and Thailand, with about 7.8% global trade; and the largest exporter to China with 24.5% market share. With higher duty, Indian rice price will become uncompetitive and likely

prompt buyers to shift towards Thailand and Vietnam. On September 5, 2022, Thailand Government announced that this country and Vietnam had reached an agreement to increase the price of rice in the global market. In 2021, the total rice export value of Vietnam and Thailand accounted for 20.6% of total global trade.

Our stock picks under this theme are LTG, PAN and TAR

We prefer LTG, PAN and TAR as they are large exposure to rice exports, and will likely benefit from the rice prices upturn.

DISCLAIMER

This report has been prepared by VNDIRECT or one of its affiliates for distribution in Vietnam and overseas. The information herein is believed by VNDIRECT to be reliable and is based on public sources believed to be reliable. With exception of information about VNDIRECT, VNDIRECT makes no representation about the accuracy of such information.

Options, estimates and projection expressed in this report represent the current views of the author at the date of publication only. They do not necessarily reflect the opinions of VNDIRECT and are subject to change without notice. VNDIRECT has no obligation to update, amend or in any way modify this report or otherwise notify a reader thereof in the event that any of the subject matter or opinion, projection or estimate contained within it changes or becomes inaccurate.

The information herein was obtained from various sources and we do not guarantee its accuracy or completeness. Prices and availability of financial instruments are also subject to change without notice.

This published research may be considered by VNDIRECT when buying or selling proprietary positions or positions held by funds under its management. VNDIRECT may trade for its own account as a result of short-term trading suggestions from analysts and may also engage in securities transactions in a manner inconsistent with this report and opinions expressed therein.

Neither the information nor any opinion expressed in this report constitutes an offer, nor an invitation to make an offer, to buy or sell any securities or any option, futures or other derivative instruments in any jurisdiction. Nor should it be construed as an advertisement for any financial instruments.

Officers of VNDIRECT may have a financial interest in securities mentioned in this report or in related instruments. This research report is prepared for general circulation for general information only. It does not have regard to the specific investment objectives, financial situation or particular needs of any person who may receive or read this report.

Investors should note that the prices of securities fluctuate and may rise and fall. Past performance, if any, is no guide to the future. The financial instruments discussed in this report may not be suitable for all investors. Investors must make their own financial decisions based on their independent financial advisors as they believe necessary and based on their particular financial situation and investment objectives.

This report may not be copied, reproduced, published or redistributed by any person for any purpose without the express permission of VNDIRECT in writing. Please cite sources when quoting.
